Reasons For Allowance

The invention in this case is directed to a method for injecting and combusting fuel and oxidizer into a combustion chamber. While various individual steps in the claimed method are known in the prior art, none of the references of record disclose of fairly suggest a method combining the steps of injecting a combustion chamber with an oxidizer stream substantially free of nitrogen and sulfur, and alternately injecting a first combustion fuel through a first plurality of jets and second combustion fuel through a second plurality of jets such that the fuels impinge on the oxidizer stream. The claimed method is therefore considered patentable over the prior art.
